

# VFD3-64P-GTO Installation Guide

Fits 1964-67 Pontiac LeMans, Tempest and GTO without gauges.

1. Remove the cluster from the vehicle. Remove the factory light bulbs and wiring from the back of the cluster. Remove clear lens and front gauge separator panel. The panels covering the outer two openings can be removed by bending open one of the retaining tabs. The plastic light guides can also be removed from the factory gauge can.

2. From the back remove the 4 screws indicated in the photo at right to remove the speedometer and the fuel gauge. The speedometer will be removed from the front and the fuel gauge from the rear.

3. Remove the screw from the front of the battery indicator light on the top left as indicated by the arrow in the photo at left.

4. Apply the included edge protector to the original fuel gauge opening in the can as shown at left. Use several dabs of silicone to hold it in place.

5. The metal tab, as indicated with the red arrow, needs to be bent as shown in the photo at right.

6. Pass the ribbon cable through the original fuel gauge hole as shown above. Guide the ribbon cable through the hole as the gauge assembly is positioned into the factory gauge can.

7. Use the two screws and black plastic washer included to hold it into the factory housing. One screw goes in the hole in the upper left of the can. The other screw and black plastic washer goes on the lower right through one of the original light bulb holes. Do not over tighten this screw.

8. Replace the front gauge separator panel and clear lens. Block off pieces are included to be siliconed into the factory indicator holes in the bezel. Reinstall the gauge cluster onto the original bezel.

See main instruction manual for the remainder of the installation.

**WARNING:** This product can expose you to chemicals including lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)
