Your new RTX-53C kit includes:

RTX Display

Universal Sender Pack

Buzzer

Installation Manuals

Main Harness

Switch Assembly

Control Box

(6) 10-24 x 3" Studs and Hex Nuts

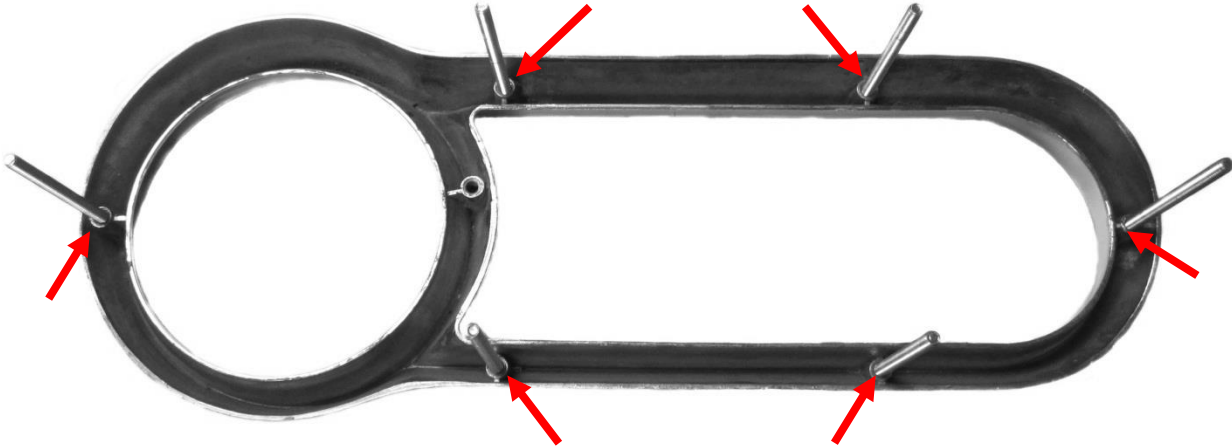

(2) Mounting Brackets

Installation

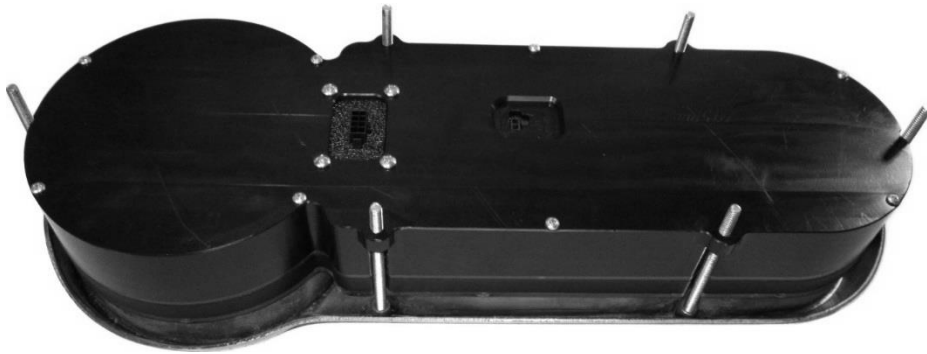

1. Remove the stock bezel, gauges, and the trim between the gauges from the dash. Also remove all the studs so you have a bare bezel. The only item to be reused is the original front bezel.

2. Insert the six (6) supplied studs in the holes shown below. Thread them in until they stop; tighten with pliers, taking care not to damage the end of the threads or twist them off.

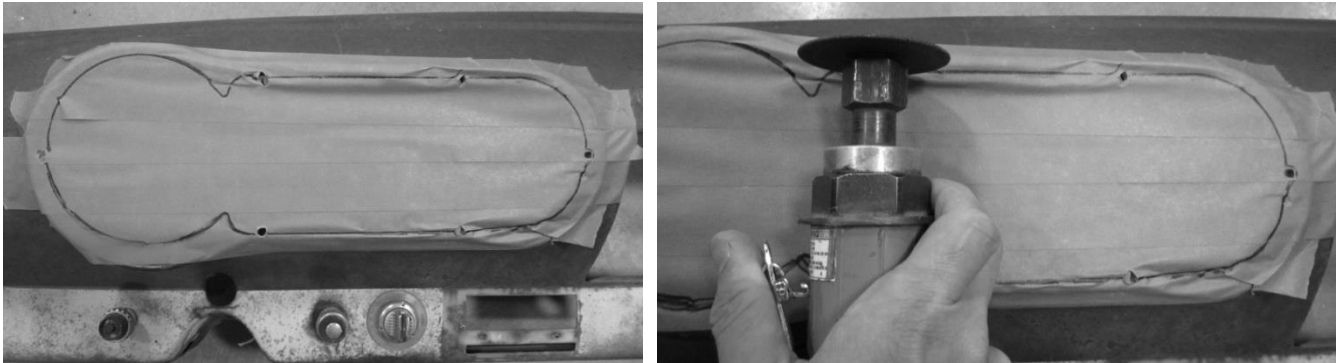

3. Place the RTX display in the original bezel, using care to not scratch the lens.

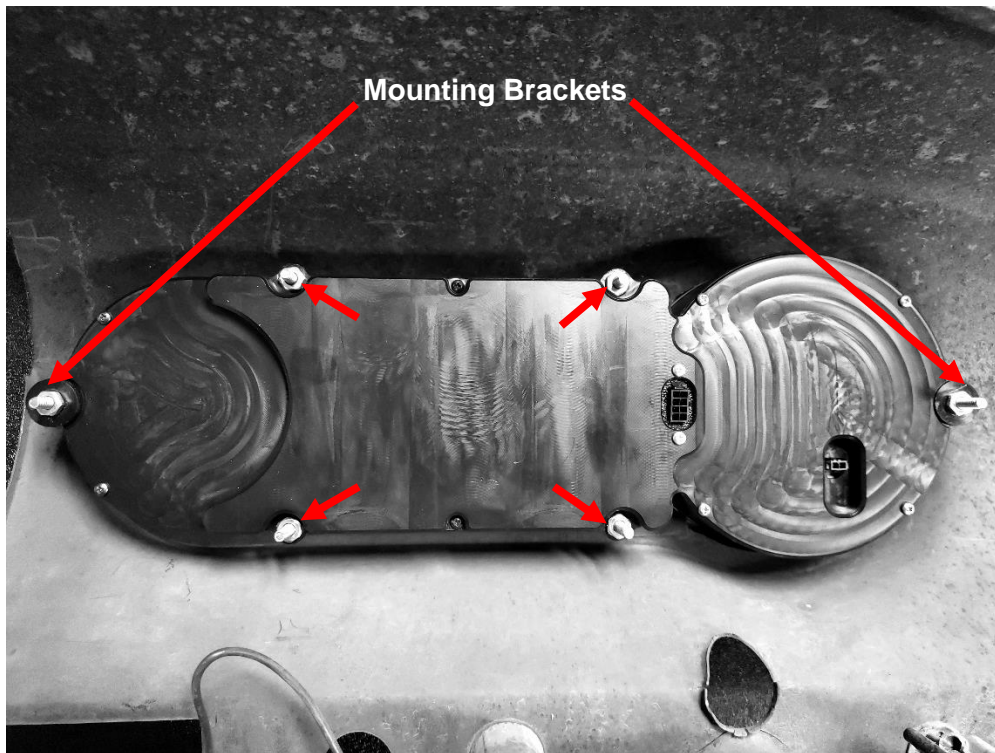

4. Lay masking tape across the entire gauge location to mark the cut line using the RTX gauge cluster as a template. Use the studs to align the RTX unit; be sure all six studs are in their respective holes in the dash.

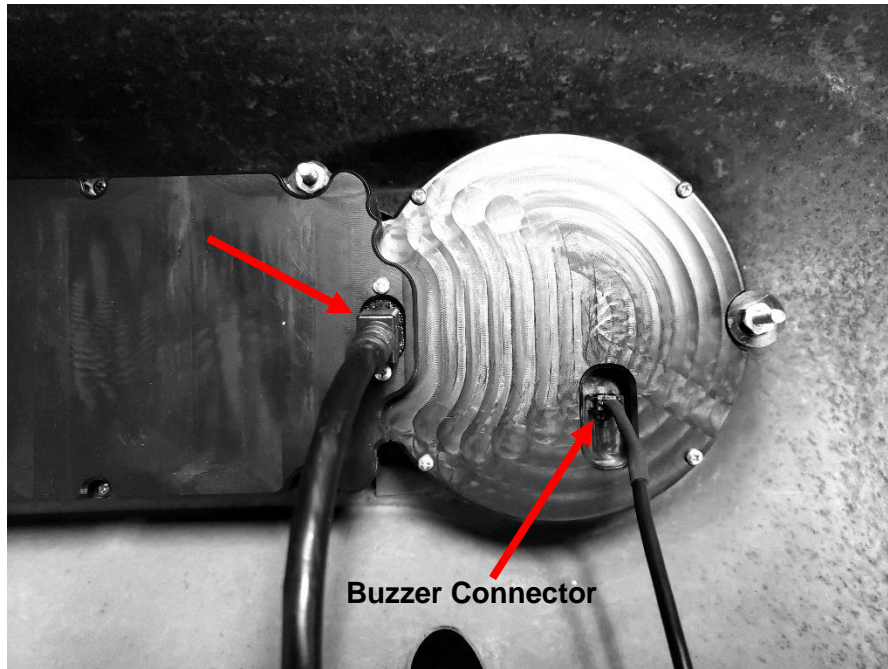

5. With the cut lines marked, you can now cut the center of the dash out to fit the new RTX display. Be sure to prep the rest of the car as needed to protect the interior and especially glass from sparks and metal shards. Use the metal cutting tool of your choice and work slowly as to not overheat the metal and damage paint in a visible area.

6. Place RTX display with factory bezel and attached studs into dash. Secure the system with the two provided mounting brackets on each end and two 10-24 nuts. Install the remaining four nuts on the four center studs. Before final tightening, double check alignment of display.

7. Connect the provided Main Harness and the Buzzer (optional for audio feedback) to the back of the RTX system.

8. Refer to the main manual for wiring instructions to complete the RTX installation.
