**8X #4 Thumb Nuts for Auxiliary Gauges**

**CAT5 Cable**

**Control Box**

**CAT5 Cable for Tachometer**  
 NOT INCLUDED WITH VHX-1050

### Installation

1. Use the provided template to mark out the 3 3/8" and 2 1/16" openings needed to fit the VHX displays. Ensure there is adequate clearance behind the desired mounting location. The display units need approximately two inches of depth behind the dash.

2. With the appropriate openings cut, place the VHX displays into the dash, then slide the gasket and mounting cup over the back of the gauge. Use the appropriate supplied thumb nuts to secure each gauge.

3. Connect the provided CAT5 Cables to the back of the Speed and Tach and carefully route the other ends to the control box mounting location.

4. The auxiliary gauges have color coded connectors and harnesses to simplify connection to the Speed gauge. For example, match the auxiliary gauge with the blue connector to the blue connector on the back of the Speed gauge using the harness marked blue. Repeat with red, yellow, and green harnesses.

5. Refer to the main manual for wiring instructions to complete the VHX installation.
