36" CAT5e Cable

2x Short Brackets

2x Long Brackets

4x Nylon Thumb Nuts

Switch Assembly

Installation

1. Remove the factory instrument cluster by disengaging the four spring clips securing the instrument cluster to the dash. No components from the original cluster will be reused, and it may be set aside.

2. Carefully insert the new VHX system into the front of the dash. From the back side, place the two provided **Short Brackets** on the top studs, and the two **Long Brackets** on the bottom studs. Firmly tighten the brackets down with the provided **Nylon Thumb Nuts**.

3. Attach the provided **36" CAT5e Cable** to the back of the VHX system. Carefully run the other end of this cable to the control box mounting location. Refer to the main VHX manual for wiring instructions to complete the installation.
