Ford Speed Adapter

Switch Assembly

CAT5 Cable

Control Box

Installation

1. Installation of this VHX instrument system requires considerable modification to the stock instrument housing. To reduce the chance of damaging other interior components, the wiring harness, or any other part of the car, it is advised to completely remove the gauge housing to perform the required modifications.

2. Remove the eight (8) push pins so you can completely remove all the original gauge pieces.

3. All raised bosses will need to be trimmed flush while two sections will need to be removed.

4. Ensure all areas are properly cut by placing the VHX gauge into the gauge housing and making sure the back of the lens sits on the housing and is not raised.

5. Mount the VHX gauge to the housing using the provided eight (8) push in retainers.

6. Connect the provided CAT5 cable to the back of the VHX gauge.

7. The gauge housing is now ready to re-install into the vehicle using stock hardware. Take care when routing the CAT5 cable to the control box mounting location. Refer to the main manual to complete the VHX installation.
