

VHX-70D-STD

Dakota Digital VHX Instrument Installation
For 1970-74 Dodge/Plymouth E-Body Non-Rallye

Your new VHX-70D-STD kit includes:

VHX Display

Universal Sender Pack

Switch Assembly

36" CAT5 Cable

Control Box

(3) Indicator Harnesses

Installation

1. Remove the stock plastic bezel from the dash. Retain all factory hardware for reassembly.

- Remove the stock gauge cluster by removing the four (4) screws; retain hardware for reassembly.

- Mount the VHX system to the dash by reusing the four (4) screws that held the factory cluster.

- 4A. This system comes with two options for the turn signals and brake indicator. You can have the indicators located in the faceplate of your new VHX display, and/or indicators in the stock locations. To use the new faceplate indicators, follow the wiring instructions found in the main VHX manual. To optionally use the stock locations, do not connect the signal wires to the VHX control box. Instead, use the two provided two-wire harnesses. The harnesses plug directly into the connectors on the back side of your new VHX system:
- WHITE\GREEN wire to INDICATOR CIRCUIT
 WHITE\BLACK wire to CHASSIS GROUND

- 4B. Attach the provided CAT5 cable to the back of the VHX system and carefully route the open end to the control box mounting location.

5. Determine which gauge bezel you have based on year and/or model; a bezel that has the indicator face flush to the front of the bezel or a bezel that has a step where the indicators are recessed from the front of the bezel. If you have the stepped bezel you will need to remove the three (3) indicator light guides by removing the two (2) small phillip screws on each light guide. Re-install the gauge bezel to the dash using the factory hardware and refer to the main manual for wiring instructions to complete the VHX installation.

Indicators are flush

Indicators are stepped

Indicator light guides remain

Indicator light guides are removed
